

Land Trust Roundtable

February 15, 2022

Remote Monitoring

New Technology for Conservation Easement Monitoring

This virtual Roundtable will feature the use of state-of-the-art technology for monitoring land conservation easements during COVID and beyond. Panelists will share their successes and challenges using drones as well as Lens (which uses high-definition aerial and satellite imagery) to complete site evaluations instead of traditional “boots-on-the-ground” monitoring visits.

Speakers:

| | | |
|-------------------|--|---------------------------------|
